Crestview High School to start using cutting edge disinfection technologies

Crestview High School will employ GenEon and E-Mist through partnership with Rhiel Supply

Austintown, Ohio (August 8, 2016) Rhiel Supply is proud to announce that Crestview Local Schools will now be using E-Mist electrostatic surface disinfection and GenEon on-site generation (OSG) technologies. A press conference will be held on August 19, 2016 at 11:00am at Crestview High School. The press conference will focus on how these new disinfecting and cleaning products will benefit the student body and the school district. Following are some of key the points that will be covered at the press conference:

- Increased efficacy of the EPA registered disinfectant from GenEon will allow for better and faster disinfection thus leading to a healthier, happier staff and student body
- The efficiency gained from the use of electrostatic disinfection will allow the cleaning staff to more comprehensively and frequently disinfect the touch points in the school
- GenEon OSG produces non-chemical solutions for disinfecting and cleaning and E-Mist reduces the amount of disinfectant required to make a room Touch Point Healthy. So together they create a safer, more sustainable environment that promotes student development
- For GenEon notable kill claims relevant to education are Norovirus, MRSA, and of course the common cold and flu

Crestview Local is the first school district in our region to employ these technologies. For more information visit <http://geneontechnologies.com/> <http://www.emist.com/> rhiel.com/geneon rhiel.com/e-mist
